DISINFECTION AGAINST CORONAVIRUS

Rely+On Virkon

A sanitation solution with an established prevention protocol targeted to inactivate a large spectrum of pathogens, including Covid-19.

Luxuryspa Health Care Division has been practicing the sanitation and disinfection of air and surfaces for years, particularly in hospitals (e.g. surgical rooms), retirement homes, pharmaceutical industries (e.g. white rooms), etc., as well as in the cruise industry, serving the worldwide best-known companies.

As it can be easily assumed, according to the forecasts of the leading experts on this issue, the problem of Covid-19 and the consequent prevention and sanitation of environments and surfaces, will not be limited to this year of the emergency but it will also be present in the medium and long term, until a final pharmaceutical and immune mitigation is reached.

Therefore we would like to present the **Luxuryspa Health Care Division** products and treatments, highlighting its long experience over time.

Unlike many operators that are still offering sanitation through spraying methods performed by using hypochlorite, chlorine or ozone, **Luxuryspa Health Care Division** recommends a very good device, Felmar®, for the dry and odourless aerosolisation combined with the use of the disinfectant Rely+On Virkon™, a Medical-Surgical Device (Registration no. 16765, Ministry of Health), which has recently obtained a certification for the inactivation of Covid-19, as well as of several other pathogens.

The Luxuryspa Health Care Division sanitation method is the one performed in the surgical rooms of many Italian hospitals.

Protocol in use:

- Treatment of environments with dry aerosol (it does not damage metal furniture, fabrics, leather, wood and electronic devices),
- Use of a certified non-toxic medical-surgical device for the inactivation of Covid-19,
- Dry aerosolisation that guarantees total and homogeneous distribution of the disinfectant on every surface, as well as in the air up to a height of 6-7 metres,
- Targeted treatment on high-risk surfaces in constant and/or frequent contact with hands such as light switches, computer keyboards, mice, telephones, remote controls, lockers, printers, toilets taps, coffee machines, door handles, etc.,
- The product applied is guaranteed by ISO quality certifications for the prevention of pathogens proliferation.

Sanitation of Air Ducts

This new range of devices allow to sanitize the air ducts in order to reduce the risk of infection due to bacterial growth, and to improve the quality of indoor air.

The aeraulic systems, in fact, can become the home and vehicle of transmission of organisms harmful to health such as molds producing toxins, allergens, bacteria like Legionella, etc. In the case of legionnaires disease, a serious lung disease, there are some environments that are particularly at risk for occupants such as hospitals, nursing homes, retirement homes or spa facilities.

The **Sanitation of Air Ducts** performs an effective prevention activity and an important sanitisation for any type of aeraulic system is guaranteed in hospitals, food companies, shopping malls, spa areas, offices and more. The system is easy to install and has a very low energy consumption. There is a system for monitoring the state of operation from remote and the possibility of warning in case of need for maintenance.

SAFETY CABINETS

Hand Hygiene Solution

Meritech provides the only fully automated handwashing systems that guarantee results. The systems increase efficiency and minimize risk in many different sectors including food production, clean rooms, restaurants, theme parks, cruise lines and more.

This station is designed to consistently remove more than 99.9% of harmful pathogens from hands when used with UltraPure Hand Hygiene Solution.

The CleanTech® Automated Handwashing Station features a stainless steel, watertight cabinet designed for wall mount in high-use areas and is ideal for use in public areas of cruise vessels.

Features:

12-second wash and rinse cycle activates automatically via infrared photo-optical sensors.

Visible compliance monitor automatically counts number of hand wash cycles.

Designed for high-use areas.

Wallmount.

Washes up to mid-forearm.

CIP friendly stainless steel body.

Solutions out indicator.

Optional Integrated Air Curtain Dryer.

DISINFECTION AGAINST CORONAVIRUS

In order to be certified as **VIRUCIDAL**, a treatment is to be carried according to a method approved by the **UNI EN 14476**

This is the **guarantee** offered by
Luxuryspa Health Care Division
against COVID 19

DISINFECTION AGAINST CORONA**VIRUS**

The “Decree-Law no. 18 of March 17th, 2020 Art. 64, Par. 4”

Only mentions 3 elements that are suitable for the sanitation and prevention from
CORONAVIRUS:

SODIUM

HYPOCHLORITE
(min 0.1-0.5%)

Possible use only
in the
LIQUID STATE

ETHANOL

(min 61-71%)

Possible use only
in the
LIQUID STATE

HYDROGEN PEROXIDE

(min 0.5%)

Possible use only in
the
LIQUID and
GASEOUS STATE

OZONE

The Decree-Law
does not mention
it
